1. Código

```
program potencias
               \begin{array}{lll} & \text{integer} & :: & i = 0 \\ & \text{integer} & :: & j = 0 \\ & \text{integer} & :: & m = 2 \\ & \text{integer} & :: & n = 2 \\ & \text{real}\left(16\right), & \text{dimension}\left(3\,,3\right) & :: & \text{matrix} \\ & \text{real}\left(16\right), & \text{dimension}\left(3\right) & :: & \text{ini} \end{array}
                matrix(1,1) = 3
               matrix(1,2) = -1

matrix(1,3) = 0
               \begin{array}{lll} {\rm matrix} \, (\, 2 \, , 1\, ) & = \, -1 \\ {\rm matrix} \, (\, 2 \, , 2\, ) & = \, 2 \\ {\rm matrix} \, (\, 2 \, , 3\, ) & = \, -1 \end{array}
               \begin{array}{lll} \mathtt{matrix} \, (\, 3 \,\, , 1\, ) \,\, = \,\, 0 \\ \mathtt{matrix} \, (\, 3 \,\, , 2\, ) \,\, = \,\, -1 \end{array}
               matrix(3,3) = 3
               ini(1) = 1

ini(2) = 1

ini(3) = 1
                call Mpotencias (matrix , ini ,3 ,10 )
 end program potencias
            \verb"subroutine" Mpotencias" (\texttt{M}, \verb"ini", \texttt{N}, \verb"iter")
 return
 end subroutine Mpotencias
subroutine mayor(M,N,res)
    real(16), dimension(N) :: M
    real(16) :: res, temp
    integer :: i
    res = -1
    do i = 1,N
        temp = abs(M(i))
                            \begin{array}{lll} & = -1, & \\ & \text{temp} & = \text{abs}\left(\mathbb{M}(\texttt{i})\right) \\ & & \text{if}\left((\texttt{res} = -1) \cdot \texttt{or} \cdot (\texttt{res} < \texttt{temp})\right) \text{ then} \\ & & \text{res} & = \texttt{temp} \end{array} 
               end if
 return
 end subroutine mayor
 \verb"subroutine" printMatriz" (\texttt{M}\,,\texttt{f}\,,\texttt{c}\,)
               integer :: i, j
integer :: f, c
real(16), dimension(f, c) :: M
do i=1,f
                          do j=1,c
                              write (*, '(F10.6, \$)') M(i,j) end do
               \begin{array}{c} \texttt{write}\,(\,\ast\,\,,\ast\,)\\ \texttt{end}\  \, \frac{\texttt{do}}{} \end{array}
 end subroutine printMatriz
\begin{array}{lll} \texttt{subroutine} & \texttt{mul} \left(\texttt{A}, \texttt{B}, \texttt{N}, \texttt{res}\right) \\ & \texttt{integer} & :: & \texttt{N}, \texttt{i}, \texttt{j}, \texttt{k} \\ & \texttt{real} \left(\texttt{16}\right), & \texttt{dimension} \left(\texttt{N}, \texttt{N}\right) & :: & \texttt{A} \\ & \texttt{real} \left(\texttt{16}\right), & \texttt{dimension} \left(\texttt{N}\right) & :: & \texttt{B} \\ & \texttt{real} \left(\texttt{16}\right), & \texttt{dimension} \left(\texttt{N}\right) & :: & \texttt{res} \\ & \texttt{real} \left(\texttt{16}\right) & :: & \texttt{sum} \end{array}
```

2. Ejemplo

La matriz usada en este ejemplo es la siguiente:

$$A = \left[\begin{array}{rrr} 3 & -1 & 0 \\ -1 & 2 & -1 \\ 0 & -1 & 3 \end{array} \right]$$

Número de iteraciones: 5

3. Resultados

Se imprime primero la matriz u y luego la matriz v en cada iteración.
